

## MelmetCase

MelmetCases™ are precision made from a .187 thick ABS plastic sheet. This heavy wall plastic and bonded construction results in an extremely rigid case that will withstand many years of constant use. Each case is fabricated with edge extrusions and corner caps. A choice of proprietary hinges and latches are available to match the size and intended use of the case. Precision cutting assures a flat seamless fit between the lid and base without the need for valances. This means the top meets the bottom with a very precise fit.

# CUSTOM-SIZE CASES,

## CUSTOM CASES FOR SENSITIVE AND FRAGILE EQUIPMENT

## MelmatCase

Patented MelmatCases have been designed and developed as a replacement choice for wooden instrument boxes and gauge boxes through their ability to provide a durable long term storage solution for fragile and sensitive instruments.

MelmatCases are offered in a size range of two inches long up to 96 inches long. Minimum and maximum sizes for depth and width can be custom-sized by customer request depending upon the application and the configuration.

Product improvement is a constant at Melmat, Inc. As certain cases become improved upon, they are replaced by new models of the same size and function.
